

Jack Van Zeeland

— SOFTWARE ENGINEER · CHICAGO, IL

920-883-0243 · Jack.VanZeeland@outlook.com · jackvanzeeland.com

EXECUTIVE SUMMARY

Software Engineer with proven expertise in full-stack development, system design, and scalable automation architecture. Delivered high-impact solutions across Python, TypeScript, SQL, and cloud platforms (AWS, Azure), with strong fundamentals in algorithms, data structures, and cross-functional collaboration.

EXPERIENCE

Echo Global Logistics

June 2025 – Present

Business Automation Engineer

- Built and deployed 17 production automation solutions end-to-end, demonstrating full software development lifecycle expertise from requirements gathering through deployment and maintenance
- Optimized SQL queries using advanced techniques (CTEs, subqueries, index analysis) to diagnose and resolve performance bottlenecks, reducing runtimes and database load across legacy systems
- Architected a high-frequency integration pipeline processing hundreds of records every 5 minutes using optimized SQL and Python Azure Functions, fanning data across up to 6 internal APIs with comprehensive error reporting and bidirectional sync
- Conducted code reviews across the automation team to maintain code quality, catch issues early, and establish best practices as systems scaled
- Mentored 2 automation interns through iterative feedback and guided problem-solving, helping them develop stronger technical reasoning and implementation approaches
- Co-owned incident triage and resolution across the automation portfolio, diagnosing production failures and shipping fixes within sprint cycles

Echo Global Logistics

February 2024 – May 2025

Robotic Process Automation Developer Intern

- Built 17 production automations from scratch, systematically solving complex business problems and recovering 131,000 annual labor hours across the organization
- Designed and implemented an ETL data pipeline that centralized automation metrics and powered automated ROI reporting, enabling leadership visibility into program performance
- Wrote comprehensive documentation and runbooks enabling any engineer to maintain automations independently, improving team knowledge sharing and reducing single-point-of-failure risk
- Co-owned incident triage and resolution, diagnosing failures quickly and shipping fixes to production within sprint cycles

Orbis Corporation

May 2023 – August 2023

Quality Intern

- Performed statistical process analysis using R to model and optimize industrial machine input ranges, improving production efficiency through data-driven decision making

EDUCATION

University of Wisconsin-Madison

September 2021 - May 2025

BS Data Science & BS Finance

COURSEWORK Data Science Programming · Machine Learning · Business Analytics ·
Algorithm Design · Data Structures

TECHNICAL SKILLS & CERTIFICATIONS

LANGUAGES Python · TypeScript · JavaScript · SQL · R · VB.NET · HTML/CSS

PLATFORMS & TOOLS React · Next.js · Git · Azure DevOps · AWS (S3, Lambda, API Gateway, CloudFormation, DynamoDB, CloudWatch) · Supabase · Drizzle ORM · UiPath Studio · UiPath Orchestrator · Power Automate · Tailwind CSS · Vercel · ServiceNow · Tableau

CERTIFICATIONS UiPath Certified Professional Automation Developer
Microsoft Power Automate - Advanced Business Automation
Microsoft Copilot for Productivity

PERSONAL PROJECTS

FormFit

React · TypeScript · Supabase · Tailwind CSS · Vercel

Built a full-stack fitness coaching platform with role-based access control (admins, coaches, trainees), real-time messaging, workout/meal plan assignment, progress tracking via photos and measurements, and invitation-only onboarding. Demonstrates proficiency in system design, authentication, and production-grade backend architecture.

NameKeep

Next.js · TypeScript · Turso · Drizzle ORM · Google Maps API · PWA

Built a mobile-first PWA for managing venue-based contacts with geolocation-based sorting and map integration. Showcases distributed database architecture, API integration, and mobile-first full-stack development.

Budget Tracker

React · TypeScript · Supabase · Vercel

Developed a full-stack personal finance application with transaction history, budget categorization, database design, and data visualization. Demonstrates end-to-end full-stack development and system design fundamentals.

Wordle Algorithm Solver

Python · Regex

Built a Python algorithm that optimizes guess strategy in Wordle using pattern matching and constraint satisfaction, outperforming or matching manual play in 87% of games (46/53). Demonstrates algorithm design, optimization, and benchmarking expertise.

Reddit Stories

Python · Youtube API · Reddit API · Text-to-Speech API

Developed an end-to-end automation pipeline that retrieves Reddit content, converts to speech, generates subtitles, compiles videos, and uploads to social media. Gained 20+ subscribers and 50,000 views. Demonstrates API integration, data processing, and system design at scale.

UiPath Queue Processor

JavaScript · HTML5 · Papa Parse

Built a tool that transforms and flattens UiPath Orchestrator queue exports for QA workflows, replacing fragile VB macro-based processes. Demonstrates problem-solving, internal tooling development, and developer experience optimization.
